

WIHV Report Guide:

WIHV CQI – Safe Sleep Report

This guide provides technical information and additional program instructions for users accessing the WIHV CQI – Safe Sleep Report.

Report purpose:

The WIHV CQI – Safe Sleep Report was designed to provide sites with monthly data on safe sleep practices of children enrolled in their program services.

Who is counted:

Actively enrolled children who are 12 months or younger on the last day of the month. Depending on the measure, these children are counted in the numerator (the green portion of the bar) if they meet the measure’s criteria.

Report Functionality:

Each measure of the report has a stacked bar showing the count of children depending on whether they meet the criteria for the measure. Selecting a segment of the bar (green if they meet the measure’s criteria, gray if they do not but are still 12 months old or younger on the last day of the reporting month) will populate the table on the right side of the report with a list of those children by Child DAISEY ID, Child Name, Child Date of Birth, and Date of Most Recent Child Health and Wellness Form (pictured below).

Filters used in this report:

Month	Year	Grantee	Organization	Home Visiting Model	Enrollment Type
May	2018	(All)	(All)	(All)	FFHV

Data can be filtered by Month, Year, Grantee, Organization, Home Visiting Model, and Enrollment Type.

Report Measures

Denominator Status:

Every measure on this report counts all children who are 12 months or younger on the last day of the reporting month in the denominator.

Measure 3: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that they sleep on their back and they always sleep this way.

Measure 4: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that the child never sleeps in the same bed as the caregiver.

Measure 5: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that the child sleeps in either a crib/bassinet or a Pack'n'Play.

Measure 6: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that the child sleeps with a fitted crib sheet or nothing.

Measure 8: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that the child's mother currently breastfeeds or pumps breast milk, or has ever breastfed the child.

SMART Aim Measure: Children are counted in the numerator for this measure if the child's most recent Child Health and Wellness form before the end of the month indicates that they always sleep on their back, never in the same bed as the caregiver, in either a crib/bassinet or Pack'n'Play, with a fitted crib sheet or nothing (this is a combination of the criteria of Measures 3, 4, 5, & 6).
